BATH & KITCHEN

NSK was founded in 1965 as Oznur Pres company by pressing and metal forming. By year 2000, NSK brand was introduced for the taps and mixers for domestic markets. By year 2006, NSK has started to take place among the elite brands of the export markets.

Since 1994, our company has been manufacturing in Eskisehir Industrial area,. Within these years, production capacity and diversity of production has increased and factory reached to 40.000 sqm land in 3 facilities. All production processes that includes folding, casting, plating and assembly were made in our facilities according to international quality standards.

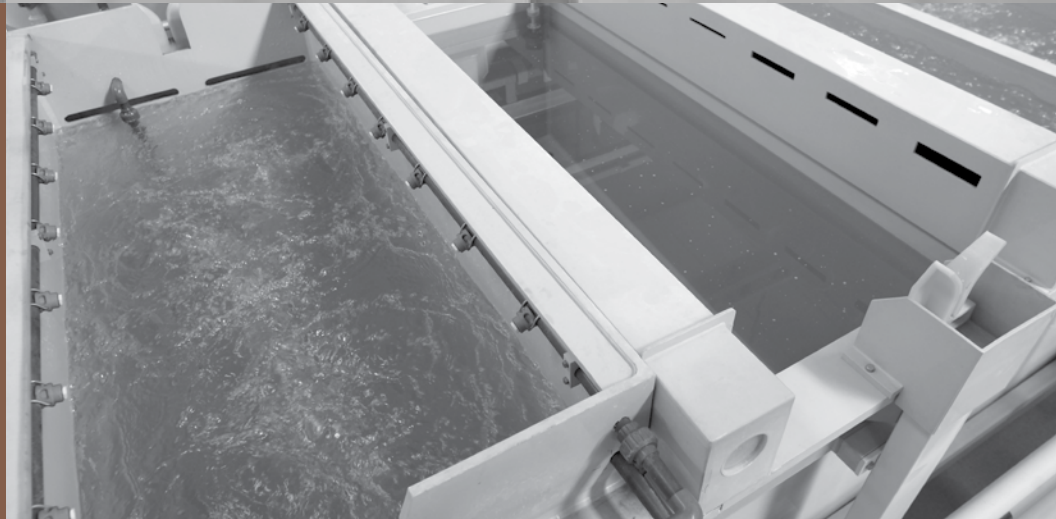

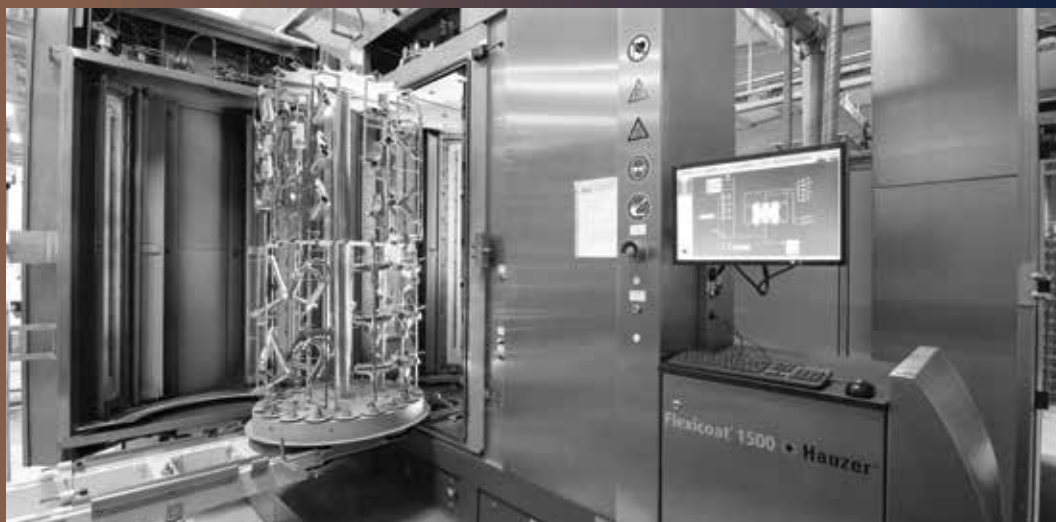

Over 50 years production experience, senior team, modern manufacturing plant and highest technology plating, NSK is combining design and functionality on its faucets, and exports more than half of its production. In domestic market, NSK is adding value to big residential projects, hotels, shopping malls, hospitals and many other big projects with its faucets and taps.

NSK invested in PVD technology (Physical Vapor Deposition) and upgraded its plating abilities for different taste and needs of market, such as golden, platin, copper, black colors and more. One of the biggest problems that you may face in a faucet is to have scratches, dullness in the color and to lose its shininess. Faucets, plated with PVD technology are overcoming all those weaknesses and provides strong and durable faucets that are resistant to chemicals used in everyday cleaning, stays unscratched and shiny longer compared to a regular plated faucets.

NSK is part of the world's largest ceramic sanitary ware manufacturer Roca Group, a company engaged in the design, production and commercialization of products for the bathroom space, as well as ceramic floor and wall tiles for architecture, building and interior design. Its origins date from 1917, when the Roca family started building their first production plant in Gavà (Barcelona). In the centenary of its establishment, the company employs over 20,000 workers and has 76 production plants, with presence in more than 170 markets in the five continents.

NSK

Industrial coating technology that provides a longer life to product

We provide PVD technology to your hygienic bathrooms and kitchens which has widespread use in medical and automotive sector.

Additional resistance to chemicals

Fade-resistant color coating

Hardened surface, High protection against scratches

Health and environmental friendly technology

Additional protection of surface is provided through coating Titanium over Nickel and Chrome. Physical steam deposition process is being achieved with applying ultra high vacuum in an isolated special chamber which using the Plasma Technology.

* 10 years surface resistance warranty for PVD coated products.

 **BRUSHED BRONZE**

PIECES IN BOX	20
---------------	----

The image contains two technical drawings of automotive components. On the left is a standard spark plug, showing a long insulator, a central electrode, and a hexagonal base. On the right is a more complex component, likely a spark plug with an integrated sensor or a specialized plug for a specific engine. It features a similar base but with a more intricate, multi-faceted top section and a side port or sensor tip. Both drawings are in a clean, technical line-art style.
